

WHEEL PURCHASING GUIDELINES

GOLF CART WHEEL SIZE

WHEELS COME IN 8", 10", 12", 14" OR 15" DIAMETERS (THE DISTANCE MEASURED FROM THE OUTER EDGE OF THE WHEEL RIM TO THE DIRECT OPPOSITE SIDE OF THE OUTER EDGE). WHEEL SIZES DO NOT AFFECT THE PERFORMANCE OF THE TIRE - THEY ARE FOR AESTHETICS ONLY.

GOLF CART WHEEL OFFSET

AN OFFSET WHEEL MEANS THE HUB MOUNTING SURFACE IS NOT IN THE CENTER. ON A GOLF CART WITH OFFSET WHEELS, THE TIRE & WHEEL ASSEMBLIES WILL EITHER BE CLOSER TOGETHER OR FURTHER APART THAN CENTERED WHEELS, DEPENDING ON WHETHER THE WHEELS HAVE A POSITIVE OR NEGATIVE OFFSET.

ALL LIFTED GOLF CARTS REQUIRE NEGATIVE OFFSET WHEELS. ALL GOLF CART WHEELS DESIGNED FOR OFF-ROADING HAVE A NEGATIVE OFFSET. THIS ALLOWS LARGER TIRES AND WHEELS TO FIT UNDER LIFT KITS AND WIDENS THE BASE OF THE GOLF CART FOR MORE STABILITY.
